ADDRESS CHANGES

We are diligently working on our database to make sure we have current lake addresses and current mailing addresses of those who prefer receiving mail other than at the lake. Please keep us informed of any changes that need to be made. If you are a "Snow Bird" and have a different winter address, please advise us of this address and the times this should be used. We want to be sure to reach you with any mailings we may have. To make a change, please email to: office@lakescouncil.org, send a note in the mail, or call the office (260) 665-1730. Thank you for your assistance.

PRESIDENT'S LIVE BOX

Submitted by Steve Schroeder
Steuben County Lakes Council President

YOUR LAKES COUNCIL AT WORK

The last several months have been very busy. As a Lakes Council we are transitioning into, not just testing our counties water ways, but using this information to make a difference and finding solutions. We recently were part of a presentation to stop a current CAFO, from expanding from 1,000 head to 8,000 head. Our water testing program showed the evidence needed to stop the special exception. The vote from the zoning board was a unanimous No! We are also involved in and making progress with the Crooked Lake E coli problem. The wheels turn slowly in politics, but they are still turning. I am confident we will help get this problem fixed.

We are so blessed in this county for our waterways, but they are imperiled, due to lack of common-sense safeguards. This is also being addressed. The council has formed a Public policy committee to work with local and State government to enact common sense environmental friendly solutions.

This work cannot be done without you. Our membership is the driving force behind this progress. We ask that you, our members, talk to your friends and neighbors. Let them know about our Lakes Council and what we do to protect our waterways. We need your help to keep educating and growing. If we do not stand up to protect our 101 lakes who will?

Sincerely,

Steve Schroeder, SCLC President

MEMBERSHIP NOTES

Steuben County Lakes Council is now into their 51st year. Our annual member-ship drive for 2023 began in January. It gives our organization great pleasure to thank all of you who have joined us again with your membership contribution. If you have not yet joined for this year, please use the form above to show us your support.

Membership dues help provide funding for materials to Steuben County 2nd grade students to teach water quality. In cooperation with Steuben County Soil & Water Conservation District, 4th graders receive environmental materials following a field day trip in the fall. We also provide a \$5,000 scholarship to a Steuben County graduate who will be studying in the environmental sciences field each year. Monies given for scholarships throughout the year are used to supply this scholarship fund.

Your membership contribution also funds the publication of the *Bobber Watchin'* in the summer and the *Soundings* in the fall. Your contribution to the Water Quality Donation also helps to fund over 60 sites of water quality testing in the watersheds of Steuben County.

STEUBEN COUNTY LAKES COUNCIL, INC. BOARD MEETINGS

Learn more about your Steuben County Lakes Council by attending our Board meetings. They are held the first Saturday of each month (except January) at the Steuben County Community Foundation, 1701 North Wayne Street, Angola, IN, at 8:30 a.m. The August 12 meeting will be at the Lake James Christian Camp & Retreat Center starting with breakfast at 8:00 a.m. The meetings are open to the public. Come, join the discussions, and help us keep the lakes and streams clean and beautiful.

Strategic Water Quality Monitoring Program Started In Steuben County

means to identify human sources of E. coli. The results of this study will be published later this summer after the samples are submitted to the State Health Department Lab, which will analyze our samples for free. Monitoring the health of waterways provides baseline data on the ability of streams, rivers, and lakes to support human recreation and promote the health of aquatic life such as fish, invertebrates, and birds that depend on these resources. There is a common goal among many county/state agencies and organizations of achieving high quality and safe water conditions for the lakes and other surface waters throughout the county. Cross-agency and program communication and coordination of sampling efforts help realize the goals of improving water quality in the county. It is our goal that a sustainable and long-term water quality monitoring program can be established.

Happy Summer Steuben County Lakers

Submitted by Alicia A. Johnson, GA, MBAHC, CPST, Steuben County Director, Bowen Center

It is hard to believe summer vacation is upon us once again and I hope you are enjoying this time of relaxation and fun with family and friends. It is also a good time to remind our community members of the wonderful mental health services Bowen Center offers to those who may benefit even during the summer months when life can "appear to be great and wonderful"!

If you have a child who is enrolled at Hamilton Community Schools, Fremont Community Schools, or MSD of Steuben County, they have the opportunity to take advantage of their Student Assistance Program (SAP) which is provided to them through Bowen Center just by simply being an enrolled student of one of those schools! The SAP entitles the student to 2 free counseling sessions (or 4 free counseling sessions if they attend Hamilton Community Schools) and they can be utilized over the summer months as well! Life can hand students and families some challenging situations which can sometimes be tough to handle alone. Without proper help those challenges can affect personal happiness, relationships, school performance, and health. To take advantage of these services, simply contact our office and let our Patient Services Team know you would like to use your school's Student Assistant Program counseling sessions.

We also offer an 8-week Social Skills Summer Program that is available to qualified students. This program helps students to maintain routine and structure over their summer break while continuing to enhance and develop their emotional, social, and behavioral skills for the betterment of their mental health and wellness.

The Angola Bowen Center also offers additional services to those in need of Psychiatric Medication Management, Individual Mental Health Counseling, Addiction Recovery Services, Marriage and Family Therapy, Skills Coaching, Medication Assisted Treatment (MAT), Psychological Testing, and coming in 2024, Primary Health Care Services. Each year, the Bowen Center helps thousands of individuals cope with life's problems and to find solutions. To get connected to services or to learn more about the ways in which Bowen Center can help you or your organization, please do not hesitate to reach out to our office at 574-385-3135.

On behalf of the Angola Bowen Center, we wish you a safe and refreshing summer!

Vigilance Is Required To Avoid E. Coli

By Eve Glazier, M.D. & Elizabeth Ko, M.D.

(Reprinted with permission from the Herald Republican)

Dear Doctors: It seems like there's a new E. coli outbreak every week. We never worried because we're careful about washing our produce, but our son-in-law got pretty sick with it after eating a fast-food hamburger. How dangerous is E.coli? Where does it come from? Is there any way to avoid it?

Dear Reader: E.coli is short Escherichia coli. It's a large and diverse group of bacteria that make their home in the lower intestines of humans and some animals. It can also be found in food, untreated water and the environment. E. coli bacteria are shaped like a rod with a rounded end are studded with thin filaments of various lengths, which help with movements in liquid environments.

As is the case with so many types of disease and illness, infection with E. coli can range from very mild to quite severe. In some cases it can lead to death. How sick someone gets depends on the specific strain of E. coli that is involved. Most strains of the bacteria are harmless. It may come as a surprise, but "good" E. coli are a natural part of the flora in our gut microbiome. They help with the syntheses of certain vitamins and also play a role in preventing certain pathogens from colonizing the colon. But several different strains cause illnesses, including diarrhea, urinary tract infections, respiratory illnesses, pneumonia and neonatal meningitis.

Infection with E. coli typically occurs by ingesting contaminated fecal material. This can be through eating raw or prepared foods, or from touching a contaminated surface and then touching your mouth. Infections have also occurred from contact with farm animals or at a petting zoo.

Symptoms begin from two to five days from infection. Abdominal pain, abdominal tenderness and cramping are soon followed by an extended bout of diarrhea. As the infection progresses, this becomes increasingly watery. Some strains of E. coli damage the inner lining of the small intestine, which can cause a bloody discharge. Additional symptoms can include nausea, chills, fever and headaches.

In healthy individuals, the disease lasts about a week. Treatment consists of supportive care to maintain hydration and electrolytes. A rare but dangerous kidney complication known as hemolytic uremic syndrome can occur in individuals whose immune systems are not robust. Unfortunately, you can't completely eliminate the risk of E. coli infection. However, you can minimize it. Your practice of thoroughly washing products before preparing and serving is good one.

Strategic Water Quality Monitoring Program Started In Steuben County

Submitted by Kate Barrett, Ph.D. Aquatic Ecologist, St. Joseph River Basin Commission

Each summer since 2009, the Steuben County Lakes Council (SCLC) has conducted water testing on many of the county's lakes, streams, and regulated drains. In partnership with the City of Angola & Trine University, Angola MS4, SCLC's water testing has resulted in over a decade's worth of data on fundamental attributes, such as bacteria levels, pH, temperature, suspended solids, and nutrients, that are used to determine whether a body of water is considered healthy or impaired. This water testing has been essential in establishing baseline information on the health of these waterways.

Analysis of the SCLC's water testing data has revealed that most of the sampled lakes and streams are impaired for full body contact recreation because of high levels of Escherichia coli (E. coli), a bacteria derived from fecal matter that can cause serious illness in humans. Analysis has also shown that total suspended solids (TSS, a measure of how much sediment is in the water column) and phosphorus, a critical nutrient that can lead to harmful algal blooms, frequently exceed water quality standards.

In response to these water quality problems, members of the SCLC collaborated with local and regional partners to develop a strategic water quality monitoring program for Steuben County. The strategic planning committee is composed of members from the SCLC, Steuben County Health Department, Soil & Water Conservation District, City of Angola MS4, Trine University, and the St. Joseph River Basin Commission. Each of these organizations shares a strong desire to collect high-quality data that can lead to long-term positive changes and improvements in water quality for the county.

The strategic planning committee has identified a need to develop and implement a water quality monitoring program that can lead to corrective action and improvements in water quality throughout the county. As a result, the committee selected 10 sites monitored by the existing SCLC program that have the most persistent E. coli problems. These 10 sites will be monitored for E. coli and a host of other variables once weekly for 20 consecutive weeks starting this summer.

Each week, two biology student interns from Trine University will collect water samples from each of the 10 sites, as well as perform detailed habitat and litter assessments. These data will provide a higher resolution picture of water quality patterns and trends, as the original SCLC monitoring program measures water quality based on three grab samples each summer. Expanding the number of sampling events per site will capture more data that will shed light on how differences in weather and other factors impact water quality.

This new monitoring program also involves a demonstration project to assess the feasibility of measuring and relating caffeine levels to E. coli to determine if the source of E. coli is from human waste. Studies in other regions have shown caffeine to be an effective tracer of E. coli from human waste. The goal of this feasibility study is to determine if caffeine might be used as a cost-effective

CHANGE

Submitted by Janet Bohney, SCLC President-elect

It has been said that the only absolute in life is change. Whether it's change in your life, living arrangements, the weather, government entities, laws, and even the way we communicate.

Change also touches every business, organization, and governing body. The Steuben County Lakes Council is no exception. We have had to change with the times just like everyone and everything else. During the pandemic, many organizations including the SCLC did not meet in person. Even many families communicated by video calls. Ironically, what seemed to be an imposition in the beginning became the norm in many cases. The lakes council like many other organizations now holds all our meetings in person and by Zoom.

The lakes council has had to evolve with times. A lot of things have changed in fifty-one years. You can now pay your dues online; water quality tests have improved; the testing has increased; water quality results are posted on our website. We have a website! Water quality testing has advanced so much that now we can even do eDNA testing on elevated levels of E-coli when needed.

With the growth of our lake communities, the growth of building in our area, the expansions of roads and infrastructure, we have to make adjustments. We cannot stand still. Our lakes and our waters need to be protected and it takes many organizations and people working together. Thankfully we have many partners helping us in this endeavor.

Just like your flip phone of the early two thousands, things need to be adapted and modernized. For this we all need to be involved. One of our lakes council adjustments during the next few months will be to look at our by-laws to see what needs to be updated. We also need people from the community to help. Support our water quality testing program, attend our meetings, join us by Zoom, support your lake association, and get involved. We, as an environmental organization, will do all we can to keep our lakes and our area clean and as pristine as possible, while keeping our motto: "Protecting Our Lakes Today for Tomorrow." It's just as important now as it was fifty-one years ago .

COME AND SHARE YOUR CONCERNS

Invasive Phragmites— A Threat to Local Habitats and Water Quality

Submitted by Kris Thomas, MS4 Coordinator/Engineering Assistant, City of Angola

The City of Angola/Trine University MS4 and the City of Angola Street Department have partnered with the Steuben County Surveyor to implement measures to control the growth of an invasive form of Phragmites (“frag-mahy-teez”) within the city limits of Angola. This invasive plant is also known as Common Reed. It is typically found in areas where stagnant water tends to collect and, as such, can be found growing in some of Angola’s roadside ditches and within both private and public ponds within the city. These stands are extremely detrimental to the natural ecology of the area unlike their native counterparts, such as sedges and native warm-season grasses.

Control measures began in September of 2022 as the city and county contracted with a local environmental company to begin a treatment program to manage the spread of this invasive plant. Most of the Phragmites you see in the city are the invasive variety and are found most often on disturbed sites. Their presence in these types of areas is due in part to the exposed soil along with associated high nutrient inputs. Once established, they can rapidly take over an area and produce extremely dense patches pushing out native vegetation. Phragmites can grow more than 15 feet tall and consist of over 20 stalks per square foot. They survive easily in stagnant pools of water.

Over time, they will bring about changes to natural wetland hydrology and degrade natural habitats that support local wetland wildlife. Other negative effects include runoff flow alteration and clogged drainage ditches, both of which raise the risk of localized flooding.

The agencies involved recognize the threat to the local ecology, as well as the threat to local stormwater infrastructure through worsening obstruction of the drainage courses within the city. Through a coordinated effort, the Steuben County Surveyor’s office will continue to ensure treatment in areas affecting regulated ditches within the city, while the City of Angola will continue to ensure treatment in areas under control of the city including roadside ditches within the right-of-way. These publicly owned areas will continue to be treated in 2023 and over the next several years as needed to prevent uncontrolled spread.

Invasive Phragmites is a county-wide issue. Residents and businesses owning private property where stands of invasive Phragmites are located may also want to consider an eradication plan. Such treatment would not only benefit each property through increased property values, but it would also support the overall local strategic plan to control the spread of this harmful invasive vegetation.

Continued on page 7

Steuben County Lakes Council’s Public Policy Committee

Submitted by Vickie Lamb, RN CCM| Nurse Case Manager

An official SCLC Public Policy Committee is forming. This committee will be instrumental in responding to the environmental toxins this area is facing. This grassroots environmental movement/ approach will be effective and ambitious. This engagement will be natural, because we are already knowledgeable, concerned and committed to the welfare of this area. We have deeply personal stories and concerns that need to be shared with all levels of government.

We will work in partnership with SCLC. We can educate and inform policy makers how our lake problems impact our quality of life. We can express our environmental and health concerns. Our concerns are here locally, and this will unite us locally to ask for change.

Public Policy engagement has advanced into digital collaboration. It has decreased in-person meetings, made email contacts and bill tracking easy, and on-line notification of policy simple.

There are excellent organizations with websites to check out, IN.gov, The Hoosier Environmental Council,(HEC), with links to key state issues, and Bill Watch. Additionally, the Socially Responsible Agriculture Project, (SRAP), provides free assistance to communities threatened by large livestock facilities. SRAP also hosts at no cost an Indiana Water Rangers training program via Zoom. Attendees will learn about water quality monitoring and how to take and analyze water samples using test strips. I highly recommend this program.

Through advocacy and influence, we are uniquely positioned to speak on the most pressing environmental issues of this unique, vulnerable lake area. We clearly have a message to deliver.

Success depends upon everyone doing their part. Everyone is welcome to participate, and there is a role for each of us to play.

The committee is eager to get started.

101 Lakes Trust

Submitted by Amy Oberlin, 101 Lakes Trust, Inc.

“Essay contest held in conjunction with local libraries”

The 101 Lakes Trust, a nonprofit land conservation organization, hosts an essay contest annually for youths and adults.

This year’s theme is “Water therapy.” And this year the 101 Lakes Trust is doing something new – combining the essay contest with local libraries’ summer reading programs.

The water therapy theme encourages people to think about how Steuben County’s lakes, streams and wetlands areas keep them healthy and happy. Writers could also consider how these precious water resources keep the world around them healthy, providing a nourishing environment.

Contest entries could be researched, educational pieces or fanciful tales. Creativity is encouraged.

Prizes are awarded in youth and adult categories: first place, \$50; second place, \$25; and third place, \$10.

The contest period will run in conjunction with summer reading programs, starting in June, and ending mid-July. Watch the 101 Lakes Trust Facebook page for details. Entries can be submitted at 101lakestrust@gmail.com.

The 101 Lakes Trust holds conservation easements on several key shorelines as well as protecting Powers Reserve in eastern Steuben County. The most recent addition was two parcels on Lake Pleasant, purchased and protected by Ryan Matthews.

Matthews received the 101 Lakes Trust’s premier Environmental Visionary Award. Last year, Steuben County Lakes Council founder Pete Hippensteel received the second annual award, which recognizes those who stand out in their efforts to preserve, maintain, and restore Steuben County’s land and lakes.

The third annual Environmental Visionary Award will be presented at the 101 Lakes Trust’s annual meeting Aug. 16 at 7 p.m. in the Wild Turkey Shelter at the Trine State Recreation Area.

The 101 Lakes Trust was born in 2006 amid efforts to protect TSRA. The former church camp contains Gentian Lake, part of the Seven Sisters chain of lakes – a lake system that remains surrounded by nature.

The 101 Lakes Trust’s mission statement is “To protect and enhance Steuben County’s natural and built environment of lakes, rolling hills, streams and neighborhoods to stimulate and support a sense of community through conservation and research.”

Those interested in learning more about the 101 Lakes Trust and how to establish conservation easements are encouraged to attend its meetings on the third Wednesday of each month at 7 p.m. at Cahoots Coffee Café, 218 W. Maumee St., Angola.

Continued from page 6

Invasive Phragmites—A Threat to Local Habitats and Water Quality

All private property owners are encouraged to learn more about invasive Phragmites as these stands are associated with area wetlands and other bodies of water. You can help stop the spread and benefit your local waters and wildlife. More information on this invasive plant species can be found at www.in.gov/dnr/files/Phragmites.pdf or https://indianawildlife.org/wp-content/uploads/2022/04/StopPhragmites_.pdf.

Water Availability In Steuben County

Submitted by Erik Anderson, City of Angola Water Department

Recent growth in agricultural irrigation and proposals for large water withdrawals to the east in Ohio have prompted the City of Angola to undertake a Water Availability Study to identify limits of the potential water supply in the county. Results from that study indicate that in the historic period of record from 2007 to 2020, there has not been a conflict between water withdrawals for public water supply and other uses in the county; natural replenishment of groundwater sources has been adequate to supply all users, and in particular the City of Angola supply has not suffered. However, increased development of agricultural supplies, continued development to the east, and changing climate conditions could alter the availability of water in the region in the future. INTERA, the consultant performing the work for the City, presented study results at a public meeting on January 18, 2023.

A key recommendation of the study is to develop a groundwater monitoring network that can supplement existing hydrologic data in the region. A volunteer network of homeowner wells can be used to collect and transmit real-time data for assessing groundwater conditions in the region. Effects of summer irrigation and increasing groundwater withdrawals can then be directly monitored to assess changing conditions that could impact the city or county water supplies. As the groundwater system is directly connected to the many lakes and streams surrounding Angola, the network would act as a sentinel system for monitoring the health of the water resources of the county.

The City is currently soliciting volunteers from homeowners with wells in areas in and around the City. If you own a private well and would like to volunteer to be part of the monitoring network, please contact Tom Selman, Water Superintendent for the City of Angola at 260-665- 9363 or water@angolain.org for more information.
